

St Thomas Church, Streatham Hill, London

Client :

R&R Plumbing Contractors

Consultant Engineers :

Mendick Waring

Publicstar Services:

Design, Supply and Install BMS controls for Heating Services.

St Thomas Church

Phase 1 redevelopment of the Church included new lighting, heating, a kitchen, disabled access facilities, storage and a new crèche and Sunday School facility. Phase 2 future works will comprise an extension of the 1st Floor.

The heating system has been refurbished with a simple BMS providing optimum start and compensation of the radiator and underfloor systems.

The BMS controls the heating to the Church and Vestry Zones whilst maintaining the underfloor flow temperature to protect the renovated oak flooring.
